to a power line;

The application has been amended as follows:

IN THE CLAIMS: Claims 1 and 10 are amended as follows:

1. (currently amended) A communication and power line diagnostics system

comprising:

a communication interface for interfacing an appliance with a power line carrier communication system, said communication interface comprising:

at least one power line connection for coupling said communication interface

at least one appliance communication connection for coupling said communication interface to the appliance; and

processing circuitry for receiving a power line carrier transmission and translating the power line carrier transmission between a power line carrier communication protocol and an appliance communication protocol; and

a diagnostics module configured to diagnose the power line, said diagnostics module comprising a power line measurement connection for coupling said diagnostics module to the power line, said diagnostics module configured to [at least one of] detect a power line sag, detect and record power failures, measure a power line frequency and measure an average power line voltage, said diagnostics module responsive to at least one of the conditions.

10. (currently amended) A method of communicating data between an appliance and a power line carrier using a communication interface, comprising:

interfacing the communication interface with the power line carrier;

interfacing the communication interface with the appliance;

of] detect a power line sag, detect and record power failures, measure a power line frequency and measure an average power line voltage, the diagnostics module responsive to at least one of the conditions, and configured to interface with the power line carrier and the communication interface;

receiving at the communication interface a power line carrier transmission over the power line carrier; and

transmitting the power line carrier transmission between a power line carrier communication protocol and an appliance communication protocol.
